

TECHNICAL PREPARATION-iPad USERS

The ITE is also accessible through an iPad application. Please note that only iPad 2 or newer are compatible with this exam application. iPad 1 cannot be used to administer the ITE. It should also be noted that the highlighting and strikethrough features that are normally available to examinees using computers are not supported through the iPad application for this examination.

Checking Your Wireless Connectivity

iPads use a wireless connection and must be checked prior to the live exam administration to verify how many examinees you may test at the same time on iPads. This test should be run on multiple iPads simultaneously to perform the check. Each iPad that performs successfully on the check is equivalent to five examinees taking the test at the same time. If there are problems, you will receive communication errors and you should contact your ITE Technical Contact or plan to test fewer residents at the same time.

Example – Take a Sample Test Page

About the Sample Test

The ABFM In-Training Exam Sample Test contains the tutorial and 10 sample questions to familiarize you with the testing process.

[Sample Test](#)

Checking Your Wireless Connectivity

iPads use a wireless connection and should be checked prior to testing to verify your school's network can handle testing multiple students at the same time on iPads. Click the "Launch Connectivity Test" button below (on multiple iPads simultaneously) to launch a self-navigating sample test. Because the test navigates between questions quicker than a student would, each iPad successfully running is the equivalent to approximately five students taking the test simultaneously. If your wireless network cannot handle the volume, you will receive communication errors and will need to consult with your network support team or test fewer students.

[Connectivity Test](#)

When you run the Connectivity Test, the iPad will automatically continue to cycle through questions for a sample test. If connectivity issues exist, an error message will appear, otherwise, the exam will automatically continue to cycle through questions. You will have to click the home button on the iPad to stop the connectivity test. Then, click "back" to return to the main menu.

Guided Access Configuration

The ITE iPad application requires the use of an iPad Guided Access session. The installation of this feature must be completed and enabled prior to the exam administration. If you attempt to launch the examination without the Guided Access Configured, you will see the screen shot below which will give you instructions for applying the setting to the iPad.

Example – Guided Access Configuration Screen

Secure Test Delivery Configuration

This application requires either the configuration of **Guided Access** or use of the iPad **Test Delivery Profile**.

Configuration of Guided Access

Guided Access prevents the use of the screen capture feature and exiting the app while testing.

To configure Guided Access (IOS 6.0 and above), please follow these instructions:

1. Go to **Settings > General > Accessibility > Guided Access**
2. Turn on **Guided Access**
3. Set 4 digit **Password** that controls the use of Guided Access and prevents someone from leaving the app

Installation of the Test Delivery Profile

The **Test Delivery Profile** prevents use of the screen capture feature. This profile has no effect on other profiles or settings already configured for the iPad. You may remove this profile at any time, but you are required to reinstall it before testing again.

To proceed with test delivery, please follow these instructions:

1. Click **Install Profile** button
2. The application will switch to the profile confirmation page
3. Once the profile is installed, the iPad will return to this page.

Install Profile

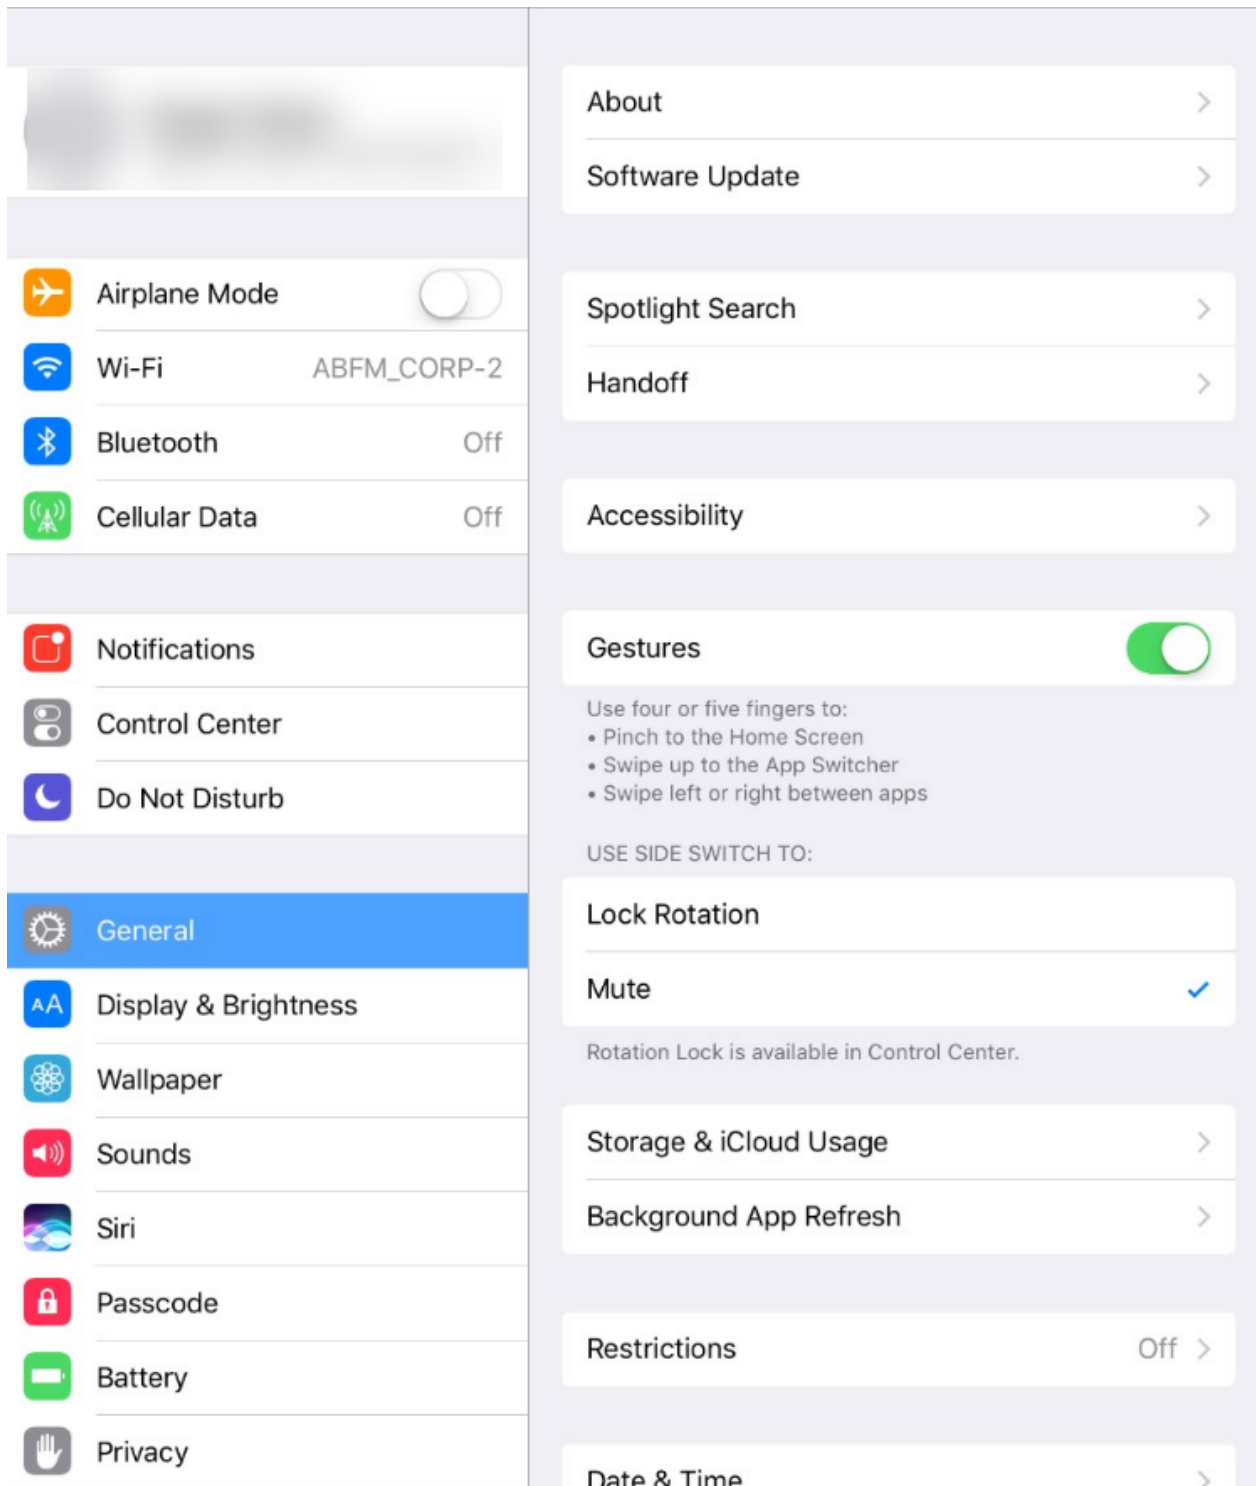

After Installation

Congratulations! You are ready to take proctored tests on this iPad. To get started, press the iPad button to
